NL recalled the importance of innovation, specifically mentioning **new genomic techniques (NGTs)** and **alternative protein sources**. NL would like to have access to NGTs within the same species. Farmers will need alternatives to increase yields which in their view will decrease as a consequence of F2F. More resilient crops will be necessary. There is a need for a clear legal framework, where GMOs are separated from NGTs. In view of NL, the study will be helpful to manage emotions as it will provide objective data. Within NL, there is an agri-envi joint position on NGTs which helped to keep the national debate on a sensible ground.
